Simplify manufacturing processes

Online and easy MRP application

- **Planning, costing and processing these are the basics of a manufacturing business.**
- **For the effective and efficient way in a manufacturing business organization must need a good proper production planning and costing method**
- **Then only the production become economical and profitable.**

- **Production planning is an activity that performed before the original production starts.**
- **It involves planning and schedules the production, ensure the availability of raw materials, machines and equipment, and the last but not the least is Human resources are available to meet the production requirements in planned dates.**

- **It also ensures that a detailed plan on how our manufacturing unit will reach the production goal and schedule the best time table for an effective and efficient production with cost effective or economic way**
- **Also, we can predict the time of the production ready to deliver, which can be useful for us to predict how long it will take to deliver the customer’s orders.**

We can provide better Service to Customers

- **Proper planning helps to provide good services to clients or customers with better quality at reasonable prices.**
- **Deliver the product as per promised delivery dates.**
- **Proper delivery and good quality both helps you to improve the relations with customers.**
- **Improve their confidence and trustworthy. It makes Promoting profitable repeat orders.**
- **Also, our customers give new leads. Or they suggest us.**

Handle the rush orders

- An effective planning can handle the rush orders
- Handle it cost effectively

- **We can generate detailed reports. Odoo provides different reports like PDF report, XLS report, Chart views etc.**

- **Odoo helps you to make decisions faster.**
- **Odoo helps you gain more control of your business.**
- **Odoo solves a number of challenges and provides large scale benefits to manufacturers to manage growth, reduce cost by cost effective methods, easy to plan the production.**
- **Odoo is easy to use.**

- **In odoo MRP we can plan and create MRP orders**
- **We can check the availability of raw materials, if it is available we can start the production**
- **After complete the production, we can post it into inventory**
- **From this records, we can generate sufficient reports**
- **There are other modules like Accounting, Sales, Purchase, Inventory gives a complete support for MRP module. Also provide to unbuilt the order, scrap the products, etc.**

- **The MRP module did not have an independent existence, its need inventory support for handle all the stock valuation, stock move etc**
- **Basic Purchase module helps to manage the purchase of raw materials etc, sales modules and CRM modules manage the customer and their sales.**
- **HR module handles the employees and their process like attendance, leave, payroll/payslip and appraiser etc.**

- **Track changes in demand**
- **Manage your stock and warehouse and stock valuation(inventory)**
- **Manage the complete process of a company, Information and functions generate on a single database.**
- **Make better decisions more quickly**
- **Make accounting easier.**
- **Increase sales and customer satisfaction.**
- **Maintain the customer relationship.**
- **Manage human resource, Make them happy, then company automatically grown up**
- **Manage purchases, bids management. bid competitiveness through pricing accuracy**
- **More accessible data.**

ERP help in manufacturing in accurate resource, real time information and wild and clear visibility, reduce the administrative and operational costs.

Flexibility

- ERP software or module is more flexible and configurable
- Users can make decisions take actions faster
- Easy to adapt the market strategies and growing business

Competition

- **E-marketing and E-commerce make large scale change in the market, world class products available**
- **We can easy to find our market, in the same time competition is also increased.**
- **So everyone participates.**

- **Good ERP can only give the full support for winning the market.**
- **Back born of manufacturing company is the production unit, but sales team are the revenue generators.**
- **A complete ERP can only handle both in parallel.**
- **Quality assurance of manufactured products.**

- **Sudden update production schedules**
- **Time savings in inside sales, purchase, planning, and costing**
- **Improved capacity planning and costing**
- **Cost savings from overall equipment, cost center management**
